

LUCAS VINÍCIUS DE CARVALHO IKEDA

Software Developer | Systems Implementation and Applied AI
Bauru – SP, Brazil | +55 (18) 99689-5151 | lucasvikeda@gmail.com | linkedin.com/in/lucasikeda | github.com/ikeda7

PROFESSIONAL SUMMARY

Computer Science graduate (FCT-UNESP) and postgraduate student in Applied AI Software Engineering. Experience with ERP systems on both ends: development (PHP, JavaScript, Oracle PL/SQL) and implementation in diagnostic medicine — process mapping, configuration, QA and ongoing support. Works with Python, TypeScript, C#, PostgreSQL and Docker on back-end and data projects, applying generative AI (prompt engineering, RAG, agents) to automate requirements gathering, documentation and testing.

WORK EXPERIENCE

Administrative Analyst – ERP Implementation | 3S Gestão em Saúde | Aug/2026 – Present

Assigned to client CDA Medicina Diagnóstica (Bauru – SP, Brazil)

- Supports the rollout of the company’s new ERP: mapping each department’s workflows, gathering requirements with business areas and configuring modules.
- Performs QA and user acceptance testing of modules before go-live, logging non-conformities and validating fixes with the vendor.
- Provides ongoing support to operations: ticket handling, remote support (AnyDesk), key-user training and documentation of operating procedures.
- Automates routine tasks and prototypes adjustments with generative AI, cutting the time spent on requirements gathering and process documentation.

Web Development Intern | BMC Active I.T / Engetex | Nov/2024 – Apr/2025

- Fullstack development of ERP modules in PHP and JavaScript, with responsive interfaces in HTML5, CSS3, Bootstrap and jQuery.
- Maintenance and optimization of Oracle PL/SQL databases, focused on query performance (DBeaver).

Human Resources Manager | EJCOMP – Computer Science Junior Enterprise (FCT-UNESP) | Nov/2024 – Aug/2026

- People and internal process management, analysis of organizational indicators, and results-focused team meetings and 1-on-1s.

EDUCATION

Postgraduate Program in Applied AI Software Engineering | UniPDS | Sep/2026 – Present

LLMs and prompt engineering; RAG, embeddings and vector databases; autonomous and multi-agent systems (LangChain/LangGraph); MCP; fine-tuning (LoRA/PEFT); AI governance.

B.S. in Computer Science | FCT-UNESP | Completed Aug/2026

PROJECTS AND RESEARCH

- **Thesis – Music Generation with Generative AI:** Transformer model in PyTorch trained on the MAESTRO, POP909 and Groove MIDI datasets, generating multi-instrumental MIDI with music theory scale filtering.
- **LexTrack – case management for a social security law firm:** tracking of deadlines, cases and client accounting. React, TypeScript, Node.js and PostgreSQL, in production.
- **Inhouse LoL:** 5v5 custom match manager with role-based drafting, Fearless Draft and automatic match import via the Riot API. React, TypeScript and Prisma — inhouse-lol.vercel.app.
- **Sports Control:** pickup volleyball manager with check-in, balanced team draw and live scoring. Flutter and Drift, running on Windows, Android and web — sportscontrol.vercel.app.
- **AI development environment:** portable set of agents, skills and hooks that standardize LLM use across the development workflow.
- **PDF document consolidation:** extracts the relevant page from batch-issued PDFs and preserves digital signature stamps (gov.br/ICP-Brasil). Node.js.
- **Technical challenges and CRUD systems:** predictive modeling of IMDb ratings (Indicium); web scraping of Brazilian health agency data (IntuitiveCare); academic management system in C#, ASP.NET MVC and SQL Server.
- **Other published projects:** X9, a social deduction party game in React and Vite (x9.dev.br); Flowers2, generative voxel art with Three.js.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, PHP, C#, Java, Dart, SQL (Oracle PL/SQL, PostgreSQL, T-SQL)

Front-end and mobile: React, Next.js, Vite, Flutter, HTML5, CSS3, Bootstrap

Back-end and data: Node.js, NestJS, Prisma, ASP.NET MVC, Entity Framework, Oracle Database, SQL Server, PostgreSQL

Applied AI: Prompt engineering, RAG, embeddings, agents, PyTorch, LLM APIs (Claude, Gemini, OpenAI)

Tools and processes: Git/GitHub, Docker, Vercel, DBeaver, AnyDesk, Jupyter; requirements gathering, process mapping, QA and user acceptance testing, ticket handling

Languages spoken: Portuguese (native) · English B2 (Linguaskill certified) · Spanish (basic)
